Cluster was one of the two missions - the other being the Solar and Heliospheric Observatory (SOHO) - constituting the Solar Terrestrial Science Programme (STSP), the first 'cornerstone' of ESA's Horizon 2000 Programme. After the catastrophic Ariane-5 accident on 4 June 1996 which destroyed the four Cluster spacecraft, the European Space Agency Science Programme Committee gave approval to refurbish the spare Cluster spacecraft and make it ready for flight. This new spacecraft, considered to be the first of a new fleet, is called Phoenix. In the meantime various options to repeat the Cluster four-point measurements are being studied. Since Phoenix, as the fifth Cluster spacecraft, will be equipped with the spare Cluster experiments, the instrumentation articles in this book are still appropriate to the new mission. Furthermore, the objectives of the recovery mission, the ground systems, the ground observation program and the theory and modelling efforts all remain unchanged. Thus this series of articles will continue to be essential to the Cluster community and to the general scientific community as the recovery mission is implemented.

ADP / ADRP 1-02 Operational Terms and Symbols is a keystone doctrine reference for Soldiers serving in the United States Army. This paperback is the combined publications ADP and ADRP 1-02 for a comprehensive doctrine reference publication.

Vols. for May 1929-Dec. 1958 include the Journal of the American Society of Heating and Air-Conditioning Engineers (called in 1929-54 American Society of Heating and Ventilating Engineers) in "Journal section."

Fluidic Components and Equipment 1968—9 presents information on a wide range of fluidic components, systems, techniques, and equipment. A few of the many ways in which fluid interaction can be utilized to perform useful functions are explained, and typical elements, circuits, and systems are described. This book is comprised of six sections and opens with an overview of the fundamentals of fluidic devices, including their four basic functional component parts: power source, receiver, control input, and control region. The next section presents several of the major areas that must be considered in developing functional networks from individual elements, including noise considerations in signal amplification, impedance matching for maximum momentum transfer, and circuit techniques for temperature and pressure tolerance. Pulse elements and circuits are then described, giving examples of how various digital functions can be implemented using jet wall-attachment elements. The remaining sections discuss jet beam deflection, confined-jet amplifiers, and vortex amplifiers, along with some practical applications of fluidic devices and principles. This monograph will be a valuable resource for engineers active or interested in acquiring data on the techniques and equipment used in fluidics.
