There are several ways to prove certain triangles are similar. The following postulate, as well as the SSS and SAS Similarity Theorems, will be used in proofs just as SSS, SAS, ASA, HL, and AAS were used to prove triangles congruent. Angle-Angle (AA) Similarity: If two angles of one triangle are congruent to two angles of another triangle, then the triangles are similar.

AA similarity : If two angles of one triangle are respectively equal to two angles of another triangle, then the two triangles are similar. Paragraph proof : Let ABC and DEF be two triangles such that A = D and B = E. A + B + C = 180 0 (Sum of all angles in a is 180) D + E + F = 180 0 (Sum of all angles in a is 180)
