Air monitoring for toxic exposures: including emergency ...

Time-weighted-average (TWA) monitoring is used to assess the average exposure of a worker to one or more chemicals over a specified period of time – usually a standard eight-hour shift. This is conveniently carried out using diffusive or pumped sampling, but does mean that, for limited periods, a worker may be exposed to concentrations higher than the threshold limit value (TLV).

Industrial air monitoring – Worker exposure

We offer comprehensive COSHH air monitoring to determine the levels of substances in the workplace and ensure the workplace exposure limits value is not exceeded for the substances you use. We will also provide a detailed report on work practices and findings together with recommendations for remedial action.

Workplace Exposure Monitoring & COSHH Air Sampling ...

15.2.4 Air toxics strategies. Air toxic emissions from vehicles and other mobile sources are a growing concern. Near-roadway environments can be substantial exposure pathways to benzene and other organic air pollutants. And in nations that have not banned leaded gasoline, near-roadway exposures can be a major contributor to Pb body burden [4]. Air toxic exposure from mobile sources, therefore, is particularly worrisome for children, given the neurological, developmental, and cancer risks.

Air Toxics - an overview | ScienceDirect Topics

In today's climate of increasing threats, the ability to monitor the air for toxic substances is more critical than ever before. Air Monitoring for Toxic Exposures explains the procedures for evaluating potentially harmful exposures to people from hazardous materials, including chemicals, radon, and bioaerosols.
