Taxonomy usually refers to the theory and practice of describing, naming and classifying living things.

Why taxonomy is important for biodiversity-based science ...

Taxonomy is our inheritance where we define the places to which they belong. In the same way, it provides an easy to identify the categories of the species so as to have an idea of the existing conditions and to plan necessary measures for the biodiversity conservation.

What is the role of taxonomy in biodiversity conservation?

Using morphological, behavioural, genetic and biochemical observations, taxonomists identify, describe and arrange species into classifications, including those that are

new to science.

What is Taxonomy? - Convention on Biological Diversity

At this stage, order was established in the nomenclature of alternarioid hyphomycetes. Up to the end of the 2000s, the *Alternaria* nomenclature system intended to reflect maximum morphological diversity, to catalog biodiversity, and to allow for morphological identification (Gannibal 2012). The fifth stage (2003 – 2015): molecular phylogenetic taxonomy

World biodiversity and European Taxonomy, Strategies in Taxonomy: Research in a Changing World (2009) Recommendations of the meeting of the European Platform for Biodiversity Research Strategy held under the Czech Presidency of the EU.

Belgian Biodiversity Platform : Biodiversity and Taxonomy

In biology, taxonomy (from Ancient Greek $\tau\acute{\alpha}\xi\alpha\sigma\iota\varsigma$ 'arrangement', and $\mu\acute{\epsilon}\theta\omicron\delta\omicron\varsigma$ 'method') is the scientific study of naming, defining (circumscribing) and classifying groups of biological organisms based on shared characteristics. Organisms are grouped into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be aggregated to form a super ...

Taxonomy (biology) - Wikipedia

Biodiversity, also called biological diversity, the variety of life found in a place on Earth or, often, the total variety of life on Earth.

biodiversity | Definition & Facts | Britannica

Confronting the taxonomic impediment to biodiversity conservation Effective conservation and management of biodiversity depends in large part on our understanding of taxonomy.

research scientists, biochemists and microbiologists working in the food and fermentation industries and in research institutions. Advanced students of food science and technology will also find it an indispensable guide to the subject.

Lactic Acid Bacteria: Biodiversity and Taxonomy | Wiley

The new classification of protists from the International Society of Protistologists (Adl et al., 2005) could not apply both the International Code of Botanical Nomenclature and the International Code of Zoological Nomenclature because the two are incompatible. The classification designated one name for each clade where multiple names from different codes had previously existed, traced ...
