Leading authorities examine the possible role of brain lipids in the development of conditions such as schizophrenia, depression, Alzheimer's disease and personality disorders and violence. A better understanding of the underlying causes of these debilitating medical disorders is of utmost importance and may contribute towards a means of prevention, amelioration and cure.

Researchers have discovered an imbalance in the amounts of fatty molecules called lipids inside the brain cells of people with Parkinson 's disease. A buildup of lipids in nerve cells may cause...

Excess lipids in nerve cells may trigger Parkinson's disease

In a novel research study conducted by a team from the Neuroregeneration Institute at McLean Hospital, investigators believe they have found key brain cell type changes involving lipids,...

New study may reveal link to lipids playing a key role in ...

Thus, in light to all of these activities, lipids and its metabolism can be attributed pivotal for brain health and its activities. Decisively, the impaired/altered metabolism of lipids and its intermediates puts forward a key step in the progression of different brain ailments including neurodegenerative, neurological and neuropsychiatry disorders.

Lipids as biomarkers of brain disorders.

Lipid storage diseases are a group of inherited metabolic disorders in which harmful amounts of fatty materials (lipids) accumulate in various tissues and cells in the body. Lipids are important parts of the myelin sheath that coats and protects the nerves.

Lipid Storage Diseases - Brain and Life

Abstract. Deregulated lipid metabolism may be of particular importance for CNS injuries and disorders, as this organ has the highest lipid concentration next to adipose tissue. Atherosclerosis (a risk factor for ischemic stroke) results from accumulation of LDL-derived lipids in the arterial wall. Pro-inflammatory cytokines (TNF-alpha and IL-1), secretory phospholipase A2 IIA and lipoprotein-PLA2 are implicated in vascular inflammation.

Altered lipid metabolism in brain injury and disorders

Neurological complications of the lipid storage diseases may include ataxia, eye paralysis, brain degeneration, seizures, learning problems, spasticity, feeding and swallowing difficulties, slurred speech, loss of muscle tone, hypersensitivity to touch, pain in the arms and legs, and clouding of the cornea.

Lipid Storage Diseases - BrainFacts

Although the lipid landscape of the brain is complex and highly dynamic, specific lipid classes now appear to be directly involved in depression and anxiety disorders. This knowledge may provide lipid-based targets for disease

prevention and treatment. It should be noted that other membrane-forming lipids in the brain may also be involved in depression and anxiety as well as in other mental disorders.

Brain membrane lipids in major depression and anxiety ...

Disorders in which intracellular material that cannot be metabolized is stored in the lysosomes are called lysosomal storage diseases. In addition to lipid storage diseases, other lysosomal storage diseases include the mucopolysaccharidoses, in which excessive amounts of lipids with attached sugar molecules are stored in the cells and tissues, and the mucopolysaccharidoses, in which excessive amounts of large, complicated sugar molecules are stored.

Lipid Storage Diseases Fact Sheet | National Institute of ...

Apolipoprotein E is the principal cholesterol carrier protein in the brain, and the gene encoding the variant Apolipoprotein E4 is a significant risk factor for Alzheimer ' s disease. Parkinson ' s disease is to some degree caused by lipid peroxidation due to phospholipases activation.

Altered Lipid Metabolism in Brain Injury and Disorders ...

Current models assume that dysfunctions in neuronal proteins and peptide activities are the primary causes of these disorders. Brain lipids determine the localization and function of proteins in the cell membrane and in doing so regulate synaptic throughput in neurons.

Brain membrane lipids in major depression and anxiety ...

In this work, dopaminergic neurons in the Parkinson ' s disease-vulnerable region of substantia nigra were found to accumulate neutral lipids, whereas in the same tissues, astrocytes have reduced lipid content, and resident microglia (a form of brain macrophage) show overall accumulation of lipids associated with inflammation.

Cell type-specific lipid storage changes in Parkinson ' s ...

Decisively, the impaired/ altered metabolism of lipids and its intermediates puts forward a key step in the progression of different brain ailments including neurodegenerative, neurological and...

(PDF) Lipids as Biomarkers of Brain Diseases

Lipid metabolism is of particular interest due to its high concentration in CNS. The importance of lipids in cell signaling and tissue physiology is demonstrated by many CNS disorders and injuries that involve deregulated metabolism.

Role of Lipids in Brain Injury and Diseases

Gaucher's disease is the most common type of lipid storage disease. It is caused by a deficiency of an enzyme called glucocerebrosidase. In this inherited disease fat collects in the brain, lungs, liver, spleen, kidneys and bone marrow. This causes the organs to enlarge, swell and malfunction as well as bone disorders and painful lesions.

Diseases Caused by Lipids | Healthfully

Moreover, brain lipids play a key role in the generation and neurotoxicity of amyloidogenic proteins involved in the pathophysiology of neurological diseases. The aim of this book is to provide for the first time a comprehensive overview of brain lipid structures, and to explain the roles of these lipids in synaptic function, and in neurodegenerative diseases, including Alzheimer ' s, Creutzfeldt-Jakob ' s and Parkinson ' s.

Brain Lipids in Synaptic Function and Neurological Disease ...

The abundance of these lipids in the brain could then represent a major advantage for cognitive function. This work partially sheds light on the mode of action of omega-3.
