This book reports the work of a 20-year collaboration between a multidisciplinary group of clinicians and developmental scientists who have created and investigated a new tool to elicit and analyze children's narratives. This tool is the MacArthur Story Stem Battery, a systematic collection of story beginnings that are referred to as 'stems.' These stems are designed to elicit information from children about their representational worlds. This method is particularly exciting because using it allows developmental psychologists and others to gain information directly from children about their emotional states and what they are able to understand, and in turn, to use this information to explore significant emotional differences among children. This work will appeal to researchers and practitioners in developmental and clinical psychology.

Autism is a baffling brain disorder that profoundly affects children's communication and social skills. This work provides a reference guide to this disease. It includes approximately 500 entries that address the different types of autism, causes and treatments, institutions, associations, leading scientists and research, social impact, and more.

This authoritative work comprehensively examines all aspects of addictive disorders and their treatment. Leading researchers and practitioners identify best practices in assessment and diagnosis and provide tools for working with users of specific substances. Issues in working with particular populations--including polysubstance abusers, culturally diverse patients, women, and older adults--are addressed, and widely used psychosocial and pharmacological treatment approaches are reviewed. An indispensable text for anyone studying or treating these prevalent, challenging disorders, the book describes ways to tailor interventions to each patient's needs while delivering compassionate, evidence-based care.
