As an innovative collaboration and cross-fertilization between Frontiers in Immunology and Frontiers in Public Health, the HIV and AIDS specialty section aims to bring together studies on pathogenesis and on public health aspects. Reflecting this broadened scope, HIV and AIDS wants to publish articles that deal with: 1) the pathogenesis of HIV and SIV infection and those that deal with the molecular origins of its immune activation and regulation; 2) genetics of HIV acquisition and disease ...

HIV & AIDS – Science & research news | Frontiers

Human Immunodeficiency Virus. AIDS is still a major global health problem. It is caused by HIV infection and induces immune destruction (Bowers et al., 2014). There are two different types of HIV, HIV-1, and HIV-2. They both have many similarities and both can lead to AIDS (Nyamweya et al., 2013). Compared to HIV-1, HIV-2 has lower transmissibility and is less pathogenic.
