SuperCollider is much more than this, though. It is an interpreted, object-oriented programming language that can be used for real-time audio DSP, algorithmic composition, sound design, interaction and improvisation, the creation of fixed-media pieces, audio installations and much more. If you want to do it, you can with Supercollider.

The building blocks of Supercollider are called UGens (Unit Generators). To put it simply, UGens take inputs and use them to produce sound. As previously seen, a sine wavetable oscillator UGen (SinOsc) can be given inputs for frequency, phase offset, output multiplier and add value to output. { SinOsc.ar (440, 0, 0.1, 0)}.play;

SuperCollider used to have a pretty nasty GUI class system that involved platform-dependent classes like SCWindow. This system is completely gone in 3.7 with a unified Qt GUI. You will still see remnants of the old GUI classes in some Supercollider help files and quarks. We're still working on updating all the help files.
