Key To Psathyrella And Related Species Vielepilze

The border line between Psathyrella and Panaeolus has always been confusing, even before contemporary DNA studies (see the linked page for more information), and we are learning that some species of Psathyrella are more closely related to coprinoid mushrooms in the genera Coprinellus and Coprinopsis than they are to some other species of Psathyrella. For more information see Matheny and collaborators 2006, Vasutova and collaborators 2008, and Padamsee and collaborators 2008.

The Genus Psathyrella (MushroomExpert.Com)

Psathyrellas are related to most inky caps, except they do not have the enzyme to turn to ink and the caps are not strongly striate. Both have dry caps, usually attached gills, black (or very dark) spores and they often have white stems. Only occasionally is there a partial veil leaving a ring. They are all saprophytic.

Psathyrella is a large genus of about 400 species, and is similar to the genera Coprinellus, Coprinopsis, Coprinus and Panaeolus, usually with a thin cap and white or yellowish white hollow stem. The caps do not self digest as do those of Coprinellus and Coprinopsis. Some also have brown spores rather than black. These fungi are often drab-colored, difficult to identify, and all members are considered inedible or worthless (for eating) and so they are oft overlooked.

Psathyrella - Wikipedia

Psathyrella ornatispora were found not to belong in Psathyrellaceae. A key to 106 psathyrelloid species in Northern Europe is provided. A key to 106 psathyrelloid species in Northern Europe is provided.

Bibliography Fungi Outer Hebrides

It is argued that when it comes to a choice between spore size and shape of basidia on the one hand, and the degree of development of the veil on the other hand as leading characters in subdividing the genus Psathyrella into subgenera, spore size and shape of basidia are to be preferred because this directly leads to establishing the subgenus Psathyrella as a very natural group.

Notes on the genus Psathyrella-IV. Description of and key ...

Psathyrella corrugis f. gracilis (Fr.) Enderle 1987 Psathyrella corrugis , is the type species of the basidiomycete fungus genus Psathyrella and family Psathyrellaceae . Originally described from Europe as " Agaricus corrugis " [1] , the species is considered non-toxic but lacking in flavor and texture.

Psathyrella corrugis - Wikipedia

Psathyrella(Fr.) Quél. (Psathyrellaceae, Agaricales) is a worldwide-distrib- uted genus of about 550 dark-spored saprotrophic taxa (Smith 1972, Kits van Waveren 1985). Many species have almost identical and variable macroscopic characters and so their identification is based on microscopic characters only.
