Christian's Analytical Chemistry focuses on more in-depth coverage and information about Quantitative Analysis (aka Analytical Chemistry) and related fields. The content builds upon previous editions with more enhanced content that deals with principles and techniques of quantitative analysis with more examples of analytical techniques drawn from areas such as clinical chemistry, life sciences, air and water pollution, and industrial analyses.

Dimensional analysis is emphasized throughout the text as an aid in problem solving. The Problems and Recommended References are grouped by topic. There are 673 questions and problems. Margin notes emphasize important concepts and are a tool for review. Fully updated to include new chapters on good laboratory practice, genomics and proteomics, as well as coverage of spectral databases (Web-based and free), chromatography nomenclature, and simulation

About The Book: This text is designed for the undergraduate one-term Quantitative Analysis course

for students majoring in Chemistry and related fields. It deals with principles and techniques of quantitative analysis. Examples of analytical techniques are drawn from such areas as life sciences, clinical chemistry, air and water pollution, and industrial analyses.

Quantitative calculations are common everyday practice for the analytical chemist in his laboratory work. This book aims at familiarizing students and technicians with such calculations done in pharmaceutical analysis, biopharmaceutics, pharmacokinetics, pharmacy

practice, pharmaceutical chemistry, physical pharmacy and radiopharmacy. It exposes the reader to various approaches for problem solving and aids in consolidating theoretical knowledge by applying it to the solution of real problems. Structured in 15 chapters, each one containing a short introduction of the relevant theory and equations to facilitate the comprehension of theoretical principles and the solution of the relevant problems.
